

Beyond Bricks: Are Cybersecurity & Occupant Safety Priorities in Your Facility?

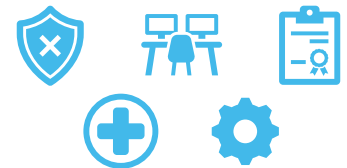

Building Cyber Security (BCS) + Intelligent Buildings = A partnership to protect you

BCS, a non-profit organization, spearheads cybersecurity protections in the smart, connected technologies in facilities and infrastructure. BCS offers a performance framework and certifications to guide facility managers in the implementation of core cyber physical principles and best practices to reduce business disruption risk and maintain cybersecurity and occupant safety in public and private commercial buildings globally.

For over 20 years, Intelligent Buildings has been at the forefront of smart building services, assessments, and building informational technology (IT) and operational technology (OT) services. Early on, IB identified a need for right-sized cybersecurity services for real estate to allow building owners, managers, and their technology partners to trust that technology would solve problems for them, not add additional risks. After completing thousands of site assessments, IB developed a managed services platform, certified to the BCS framework, to mitigate the most challenging building risks.

The Challenge

- ▶ Are all the technologies in your building resilient and monitored for cyber threats?
- ▶ Is the connectivity to all your building systems secured and managed?
- ▶ Do you know all the different technologies in your buildings?
- ▶ Do you have knowledgeable people / professionals monitoring building risk?

A Straightforward Service

CYBERSECURITY SERVICES	
One service and platform to manage multiple risk services	Scalable and modular from one property to portfolio
Secure all networks and remote access	Property budget friendly
Backup for critical building system server(s)	Simple local deployment and on-demand support
Network monitoring, threat detection, and inventory	Access to cybersecurity SMEs and 24/7 monitoring of critical systems

ONE-TIME SETUP & ANNUAL SERVICE

Action

Intelligent Buildings' industry-leading cyber services can help you secure your buildings, meeting standards developed for real estate by BCS. We'll secure, monitor, and manage your networks. Reach out to us to help you prioritize your assets and secure your buildings today at
